

Czech Chemical Society Lecture

Thursday, April 4, 2024, 14:00

University Campus Bohunice, Kamenice 5, Building A11 / room 132

What is the relationship between the Hungarian sausage, microfluidics, and macrofluidics?

František Foret

Department of Bioanalytical Instrumentation, Institute of Analytical Chemistry of the Czech Academy of Sciences, Brno, Czech Republic

Scientists often try to find relationships between the structure and properties of chemical substances. Chemical analysis provides many tools to find relevant answers about chemicals' composition, properties, and effects on living organisms. This presentation will try to review the development of some of the newer analytical tools and put them into a perspective of the life career of an individual scientist.
